Equipment.java – Sophia Brothers

Monday A period/C period = worked on what I thought I could do in the moment checkTarp, checkBoots, checkBearBag and countFlashlights.

Monday night = proved these 4 methods – took a while as the code was fundamentally right but I kept missing things like semi colons and brackets.

Wednesday A period = worked on checkTable and proved it. Originally I had trouble figuring out what to do but then it clicked and I figured it out.

Wednesday H period = worked on pairSocks and checkTents. I had a lot of trouble with figuring out how to code these methods. Everything I could think of had some flaw that would cause problems. I ended up not being able to figure it out in class.

Wednesday night = Later that night, about an hour after working on both methods, I finally figured out how to solve them. checkTents I had the right idea I just had trouble figuring out how to input it into code. With checkSocks I was at a loss but after referring back to one of our previous java files, I was able to figure something out.
