Runner

A Runner represents a person who runs.

Fields

- First name, last name
- Speed (in mph)

Constructors

- `Runner(first, last, speed)` should make a Runner accordingly.
- Should there be a default constructor? Why / why not?

Methods

- `toString()`: "{First} {Last} runs {Speed} mph."
    - example: "Helen Bell runs 55 mph."
- `getName()` returns "{First} {Last}"
    - example: "Helen Bell"
- Appropriate getters and setters
    - Be able to justify why you're including each getter and setter
- `train()` will increase speed by 0.1mph
- `isFasterThan(Runner)` will return whether this Runner is faster
- `timeToRun(distance)` will return how many hours it takes Runner to run the distance (in miles)

Main

Write appropriate tests! Refer back to previous examples.
